                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that a least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid substituted by a modified amino acid substituted by chectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a cheer in the present sequence region sequence.

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are direlin homologues and are concarcatised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a locompasses the unmodified peptides; the DNA encoding the peptides comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ghrelin-like growth hormone secretagogue (GHS) core region, SEQ ID NO:9.

The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid has been substituted by CC also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases CC caused by a deficiency in growth hormone expression or activity. In CC particular, they are useful for promoting infant growth due to growth CC hormone deficiency. The compounds of the invention are safe with CC no accompanying side effects. The present sequence represents a CC capted by a deficiency selection. The present sequence region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of novel peptide fragment SGIP of zsig33 (see AAB20101), a previously described secreted protein that is transcribed in the gastrointestinal system. SGIP is a contract that is transcribed in the gastrointestinal system. SGIP is a contract the form of growth hormone secretagogue receptor, and is therefore useful for modulating secretion of growth hormone and insuling like growth factor 1. SGIP and its variant peptides, comprising residues 1-9, 2-9, 3-9, 4-9, 2-10, 3-10, 4-10, 3-11 or 4-11 of SGIP in which at least 1 residue may be substituted, are used in claimed methods for stimulating contractability in duodenum or jejunum contissue, modulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying. Amino acid substitutions in SGIP may result in agonist or antagonist activity. The SGIP peptides are also useful for raising antibodies, identifying the SGIP receptor, screening agonists and antagonists, and identifying cells, tissues or cell lines which respond to a SGIP-stimulated pathway.
                                                                                                                                                                                                                                                                                                                                                            Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of forming a reversible peptide-
creceptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (Comprising residues 24-37
of AAB65649), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
creamsduction in a cell expressing a receptor. It is also useful for
contractility, nutrient uptake, secretion of digestive and
contractility, nutrient uptake, secretion of digestive and
pancreatic enzymes and hormones, secretion of insulin-like growth factor
cl. secretion of non-zsig33 proteins. It is useful for modulating growth
chormone secretion in a mammal having a disease associated with abnormal
levels of growth hormone, such as osteoporosis, bone repair, bone
cremodeling, low osteoblast levels, cartilage repair and remodeling,
cremodeling, low osteoblast levels, cartilage repair and remodeling,
crediting and ovulation induction, treating a mammal having
metabolic disorder requiring neurological feedback, such as satiety
requilation, glucose absorption and metabolism and neuropathy-associated
gastroincestianal disorders, and stimulating glucose-induced insular
contractions and stimulating business and stimulating glucose-induced insular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               release in a mammal. The present sequence represents a human zsig33 peptide epitope, used to raise zsig33 anti-peptide antibodies.
                                                                                                                                                                                                                                                                                                                                                                    Forming reversible peptide receptor complex for purifying cell and peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides overtors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                           New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis of infant growth disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion CC concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid has been substituted by CC also encompasses the unmodified peptides; the DNA encoding the peptides; cectors and host cells comprising such DNA; a method of producing the cC peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and assay and kit for detecting the peptides. The peptides cof the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC no accompanying side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New peptide compounds which induce growth hormone secretion elevate cell calcium concentrations, useful in treatment and of infant growth disorders -

New peptide compounds which induce growth hormone secretion elevate cell calcium concentrations, useful in treatment and of infant growth disorders -Claim 3; Pagd 193; 210pp; Japanese and and diagnosis

ဖ

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a slow encompasses the unmodified peptides; the DNA encoding the peptides cetors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth to accompanying side effects. The present sequence represents a chrelin-type growth hormone secretagogue (GHS) of the invention.

ŏ Agents for treating diseases associated with denaturation or neurons comprise growth hormone liberation inhibitor ${\tt -}$

The present invention provides agents for treating or preventing diseases associated with denaturation or death of neurons, which comprise a growth hormone liberation inhibitor. These can be used for treating or

ö preventing diseases associated with denaturation or death of neurons including those due to cerebral isohaemic disorders such as cerebral infarction or oedema. Other causes of denaturation or death of neurons included Alzheimer's disease, Pick's disease, AIDS related dementia, Parkinson's disease, anyotrophic lateral sclerosis, diabetic neuropathy and anticancer treatments. The present sequence is a peptide described in the exemplification of the invention. Gaps ö 100.0%; Score 40; DB 22; Length 28; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   হ
                                                                                                                                                           The invention relates to a novel peptide compound or its salt which . CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by caracterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by calso encompasses the unmodified peptides; the DNA encoding the peptides; certors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the convention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases cof the invention are useful for promoting infant growth due to growth Darmone deficiency. The compounds of the invention are safe with con accompanying side effects. The present sequence represents a cc ghrelin-type growth hormone secretagogue (GHS) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                               The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are CC concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by a laso encompasses the unmodified peptides; the DNA encoding the peptides; compound. The invention CC also encompasses the unmodified peptides; the DNA encoding the peptides; cetors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for treating and/or diagnosing diseases CC caused by a deficiency in growth hormone expression or activity. In CC particular, they are useful for promoting infant growth due to growth CC no accompanying side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion condentration in cells. The peptides are gireful homologues and are concarration in cells. The peptides are gireful homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promocing infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis

The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone secretion. Ghrelin agonist companies, facilitating arowth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of wight; maintenance of physical functioning, recovery of physical function, and/or appetite increase, or appetite increase is particularly useful for a patient comparing a disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulind, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail clader) and samples of treatments accompanied by weight loss include chemotherapy, radiation therapy, tapmocrary or permanent immobilisation and dialysis, and ghrelin antegoniem is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular close, appetite decrease, weight maintenance, treat obesity, diabetes and criain about a weight loss can be used for e.g. to reduce the likelihood of such diseases and for treating such diseases. Ghrelin analogue induces growth hormone release from primary-culture pituiery cells in a dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be companied analogue can be synthesised aasily and has increased solubility in physiological buffers.
                                              acquired immune deficiency syndrome; weight gain; chemotherapy; dialysis; growth hormone, muscle mass; bone density; sexual dysfunction; anorexia; wasting; radiation therapy; obesity; diabetes; retinopathy; hypertension; cardiovascular disorder; gall stone; osteoarthritis; cancer; cytostatic; metabolic; immunomodulator; anti-HIV; anorectic; ophthalmological; cardiant; litholytic; hepatotropic.
                         ghrelin analogue, growth-hormone secretagogue, GHS receptor, AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension, osteoarbhritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 4; Page 34; 37pp; English.

Perfect score:
   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ••

-1- FUNCTION: PPIASE THAT BINDS CALMODULIN (BY SIMILARITY).

-1- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMDIC PEPTIDE BONDS IN OLIGOPEPTIDES.

-1- MISCELLANEOUS: ON THE 2D-GEL THE DETERMINED PI OF THIS PROTEIN IS: 5.3, ITS MI IS: 72 kDa.

-1- SIMILARITY: BELONGS TO THE FKBP-TYPE PPIASE FAMILY.

INTEPPO; IPRO01179; FKBP-PPIASE.

Submitted (AUG-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: SELECTIVELY INHIBITS INSULIN-STIMULATED GLUCOSE
UTILIZATION AND GLYCOGEN DEPOSITION IN MUSCLE, WHILE NOT AFFECTING
ADIPOCYTE GLUCOSE METABOLISM.
-!- SIMILARITY: BELONGS TO THE CALCITONIN FAMILY.
                                                                                                  Albrandt K., Sierzega M.E., Mull E., Brady E.M.G.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     H(+) (OUE).

-!- SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), BESILON(1). CF(0) HAS THREE MAIN SUBUNITS: A, B AND C.
-!- SUBCELLULAR LOCATION: Mitochondrial.
-!- SIMILARITY: BELONGS TO THE ATPASE DELTA CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TISSUE=TUBEY;

antagonises the effect of ghrelins when administered which to a mammal

Claim 3; Page 6; 9pp; English.

ghrelins when administered to a mammal. The peptide is a synthetic analogue of ghrelin. Ghrelin is a 27-28 residue peptide isolated from analogue of ghrelin. Ghrelin is a 27-28 residue peptide isolated from distinctive cell types in the stomach of rats and humans and has an octanoyl ester attached to a serihe residue. Ghrelin is a potent releaser of growth hormone. The peptides are useful for normalising elevated growth hormone levels in mammals such as those suffering from a tumour related to overproduction of growth hormone or acromegaly. The present sequence is a ghrelin antagonising peptide of the 늉 The invention relates to a novel peptide which antagonises the effect

New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis of infant growth disorders -

Claim 3; Page 185; 210pp; Japanese.

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides, vectors and host cells comprising such DNA; a method of producing the

                                                                                                                                                    The present invention provides agents for treating or preventing diseases associated with denaturation or death of neurons, which comprise a growth hormone liberation inhibitor. These can be used for treating or preventing diseases associated with denaturation or death of neurons including those due to cerebral ischaemic disorders such as cerebral infarction or oedema. Other causes of denaturation or death of neurons included Alzheimer's disease, Pick's disease, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neurone denaturation; neurone death; growth hormone liberation innibitorerebral infarction; oedema; Alzheimer's disease; Parkinson's disease; Pick's disease; dementia; amyotrophic lateral sclerosis; cancer; disease; dementia; neuroprotective; antiinflammatory; nootropic;
